

AZ-204

Developing Solutions for Microsoft Azure

Dieses Training hat das Ziel Developern näherzubringen, wie sie End-to-End-Lösungen in Microsoft Azure erstellen können. Die Teilnehmenden lernen, wie sie Azure-Computerlösungen implementieren, Azure-Funktionen erstellen, Web-Apps implementieren und verwalten, Lösungen unter Verwendung von Azure-Speichern entwickeln, Authentifizierung und Autorisierung implementieren und ihre Lösungen mit Hilfe von KeyVault und Managed Identities sichern. Die Teilnehmenden lernen auch, wie sie sich mit Azure-Services und Services von Drittanbietern verbinden und diese nutzen können und wie sie ereignis- und nachrichtenbasierte Modelle in ihre Lösungen integrieren können. Der Kurs behandelt auch die Überwachung, Fehlerbehebung und Optimierung von Azure-Lösungen. Empfohlenes Training für die Zertifizierung zum: Microsoft Certified: Azure Developer Associate

Kursinhalt

- Erstellen von Azure App Service
- WebAppsAzure-Funktionen implementieren
- Lösungen entwickeln, die Blob-Speicher verwenden
- Lösungen entwickeln, die Cosmos-DB-Speicher verwenden
- IaaS-Lösungen implementieren
- Benutzeroauthentifizierung und -autorisierung implementieren
- Sichere Cloud-Lösungen implementieren
- API-Verwaltung implementieren
- App-Service-Logic-Apps entwickeln
- Entwicklung ereignisbasierter Lösungen
- Nachrichtenbasierte Lösungen entwickeln
- Azure-Lösungen überwachen und optimieren
- Caching und Inhaltsbereitstellung in Lösungen integrieren

E-Book Die originalen Microsoft-Kursunterlagen werden Ihnen online zur Verfügung gestellt.

Zielgruppe

Die Teilnehmer dieses Kurses sind an der Entwicklung von Azure oder an der Zertifizierungsprüfung Microsoft Azure Developer Associate interessiert.

Voraussetzungen

Die Teilnehmer sollten 1-2 Jahre Erfahrung als Entwickler haben. Dieser Kurs setzt voraus, dass die Teilnehmer mit der Programmierung vertraut sind und übergrundlegende Kenntnisse von Azure verfügen. Es wird empfohlen, dass die Schüler über einige Erfahrungen mit PowerShell oder Azure CLI, der Arbeit im Azure-Portal und mit mindestens einer von Azure unterstützten Programmiersprache verfügen. Die meisten Beispiele in diesem Kurs werden in C\# .NET vorgestellt.

Stand 16.02.2025

AZ-204 – Developing Solutions for Microsoft Azure

Implement solutions that use virtual machines

Students will learn how to properly plan for VM deployment. It covers VM creation by using the Azure Portal, PowerShell, and through code. It also covers creating and using ARM templates for repeatable deployments and how to use Azure Disk Encryption to secure information on the VM.

Lessons

Provision VMs

Create ARM templates

Configure Azure Disk Encryption for VMs

Implement batch jobs by using Azure Batch Services

Azure Batch creates and manages a pool of compute nodes (virtual machines), installs the applications you want to run, and schedules jobs to run on the nodes.

Lessons

Azure Batch overview

Run a batch job by using the Azure CLI and Azure Portal

Run batch jobs by using code

Manage batch jobs by using the Batch Service API

Create containerized solutions

You can build and run modern, portable, microservices-based applications that benefit from Kubernetes orchestrating and managing the availability of those application components. Kubernetes supports both stateless and stateful applications as teams progress through the adoption of microservices-based applications.

Lessons

Create an Azure Managed Kubernetes Service (AKS) cluster

Create container images for solutions

Publish an image to the Azure Container Registry

Run containers by using Azure Container Instance or AKS

Create App Service web apps

Azure App Service Web Apps (or just Web Apps) is a service for hosting web applications, REST APIs, and mobile back ends. Web Apps not only adds the power of Microsoft Azure to your application, such as security, load balancing, autoscaling, and automated management.

Lessons

Azure App Service core concepts

Creating an Azure App Service web app

Creating background tasks by using WebJobs in Azure App Service

Creating Azure App Service mobile apps

The Mobile Apps feature of Azure App Service gives enterprise developers and system integrators a mobile-application development platform that's highly scalable and globally available.

Lessons

Getting started with mobile apps in App Service

Enable push notifications for your app

Enable offline sync for your app

Create Azure App Service API apps

This module covers how to create and document an Azure App Service API.

Lessons

Creating APIs

Using Swagger to document an API

Implement Azure Functions

Azure Functions is a solution for easily running small pieces of code, or "functions," in the cloud. You can write just the code you need for the problem at hand, without worrying about a whole application or the infrastructure to run it.

Lessons

Azure Functions overview

Develop Azure Functions using Visual Studio

Implement durable functions

Develop solutions that use Azure Table storage

Azure Table storage is a service that stores structured NoSQL data in the cloud, providing a key/attribute store with a schemaless design. Because Table storage is schemaless, it's easy to adapt your data as the needs of your application evolve.

Lessons

Azure Table storage overview

Authorization in Table storage

Table service REST API

Develop solutions that use Azure Cosmos DB storage

This module covers Azure Cosmos DB storage. It instructs students on how it works, how to manage containers and items, and create and update documents by using code.

Lessons

Azure Cosmos DB overview

Managing containers and items

Create and update documents by using code

Develop solutions that use a relational database

SQL Database is a general-purpose relational database managed service in Microsoft Azure that supports structures such as relational data, JSON, spatial, and XML.

Lessons

Azure SQL overview

Create, read, update, and delete database tables by using code

Develop solutions that use Microsoft Azure Blob storage

Azure Blob storage is Microsoft's object storage solution for the cloud. Blob storage is optimized for storing massive amounts of unstructured data. Unstructured data is data that does not adhere to a particular data model or definition, such as text or binary data.

Lessons

Azure Blob storage overview

Working with Azure Blob storage

Implement authentication

Microsoft identity platform is an evolution of the Azure Active Directory (Azure AD) identity service and developer platform. It allows developers to build applications that sign in all Microsoft identities, get tokens to call Microsoft Graph, other Microsoft APIs, or APIs that developers have built.

Lessons

Microsoft identity platform

Implement OAuth2 authentication

Implement managed identities for Azure resources

Implement authentication by using certificates, forms-based authentication, or tokens

Implement multi-factor authentication

Implement access control

This module covers claims-based and role-based access control.

Lessons

Claims-based authorization

Role-based access control (RBAC) authorization

Implement secure data solutions

This module covers securing data at rest and during transmission.

Lessons

Encryption options

End-to-end encryption

Implement Azure confidential computing

Manage cryptographic keys in Azure Key Vault

Introduction to Azure Monitor

Azure Monitor is the central service that includes all of tools you need to monitor and optimize your solution.

Lessons

Overview of Azure Monitor

Develop code to support scalability of apps and services

This module covers how applications scale and how to handle some troubleshooting.

Lessons

Implement autoscale

Implement code that addresses singleton application instances

Implement code that handles transient faults

Instrument solutions to support monitoring and logging

This module covers adding code to your app to send the data to Azure Monitor.

Lessons

Configure instrumentation in an app or server by using Application Insights

Analyze and troubleshoot solutions by using Azure Monitor

Integrate caching and content delivery within solutions

This module shows students how to leverage Azure Cache for Redis and Azure CDNs to deliver assets to users more quickly.

Lessons

Azure Cache for Redis

Develop for storage on CDNs

Develop an App Service Logic App

Logic Apps helps you build solutions that integrate apps, data, systems, and services across enterprises or organizations by automating tasks and business processes as workflows. This module covers what they are and how to create them.

Lessons

Azure Logic Apps overview

Create Logic Apps by using Visual Studio

Create custom connectors for Logic Apps

Create custom templates for Logic Apps

Integrate Azure Search within solutions

Azure Search is a search-as-a-service cloud solution that gives developers APIs and tools for adding a rich search experience over private, heterogeneous content in web, mobile, and enterprise applications. In this module students will learn how to integrate Azure Search in their solutions.

Lessons

Create and query an Azure Search Index

Full text search in Azure Search

API Management

API Management (APIM) helps organizations publish APIs to external, partner, and internal developers to unlock the potential of their data and services.

Lessons

Introduction to the API Management service

Securing your APIs

Defining API policies

Develop event-based solutions

This module covers developing event-based solutions in Azure by integrating Azure Event Grid, Event Hubs, and Notification Hubs in your applications.

Lessons

Implement solutions that use Azure Event Grid

Implement solutions that use Azure Event Hubs

Implement solutions that use Azure Notification Hubs

Develop message-based solutions

Microsoft Azure Service Bus is a fully managed enterprise integration message broker. Service Bus is most commonly used to decouple applications and services from each other, and is a reliable and secure platform for asynchronous data and state transfer. Azure Queue storage is a service for storing large numbers of messages that can be accessed from anywhere in the world via authenticated calls using HTTP or HTTPS.

Lessons

Implement solutions that use Azure Service Bus

Implement solutions that use Azure Queue Storage queues
