

UC-Trainer

Interactive Telephone Trainer for
Cisco UC End Devices

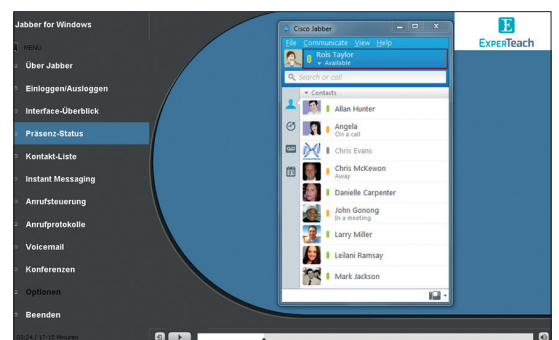

EXPERTeach

UC projects are known to be a challenge for IT departments during the first phase of their introduction. Later on, in the scope of their implementation, all employees of the company have to face many changes. They are suddenly confronted with new unfamiliar end devices at their workstations and need to understand and accept them!

Therefore, we offer the multimedia learning software UC-Trainer for the Cisco UC end devices. It guides the users interactively through the menus and operating structure of their new telephones.

This is an effortless way of getting acquainted with the new system. It is possible to adapt the software to your CI/CD regulations. Hosting by ExperTech and provision in your Intranet are available options. The UC-Trainer supports many telephone models as well as specific applications like Jabber and WebEx.

Available in
the following
languages:

-  German
-  Danish
-  English
-  Flemish
