

Linux System Administration I

Linux System Administration I

Based on the course **Linux Basics**, this course provides an introduction to the **basic administration of stand-alone Linux systems**. Besides the design and installation of Linux systems, it covers the administration of software packages and explains advanced topics such as the handling of processes, file systems, disk quotas, USB, as well as user and group accounts. Along with the course **Linux Basics**, it covers the contents of the **LPI 101 exam**.

Course Contents

- System Administration
- User and Group Administration
- The Bootloader
- System Start and System Stop
- Process Management
- Shared Libraries
- Debian Package Management
- RPM and YUM Package Management
- Hardware and Computer Architecture
- Partitioning and File Systems

Target Group

This course is designed for prospective Linux administrators looking for a compact introduction into the operation of Linux systems. Moreover, it is suitable as a preparation for the LPI 101 exam.

Knowledge Prerequisites

Basic know-how of the Linux operating system, as imparted e.g. in the course **Linux Basics**, is required. In particular, the students should be familiar with the shell and the basic commands.

Reservation and Registration

Reserve your course at the required date free of charge and in a non-binding way! We will reserve a place for you for the duration of 7 days. You can directly make this reservation, as well as a binding course booking on our Web site. Alternatively, you can simply call us under: + 49 06074 4868-0.

Guaranteed Course Dates

You can find all current course dates directly under the link: www.experteach-training.com/go/LSY1

Alternatively, you can use the QR code at the left to open this URL. Please check our website for the guaranteed course dates. These are indicated via the symbol

Your Tailor-Made Course

You want to attend this course, but with contents that are customized to your individual demands? We create advanced training programs for your project which fit your requirements precisely.

Table of Contents

Linux System Administration I

1 System Administration	7.1 Recapitulation	14 Printing under Linux
1.1 General Administration	7.2 Tree Processes—pstree	14.1 Overview
1.2 The Privileged root Account	7.3 Resource Distribution to Processes—nice, renice, ulimit	14.2 The Berkeley LPD Printing System
1.3 Getting Administrator Privileges	7.4 Further Commands for Process Management—nohup, top	14.3 The Common Unix Printing System (CUPS)
2 User Administration	8 System Logs	A Sample Solutions
2.1 Basics	8.1 The Problem	B LPIC1 Certification
2.2 User Data	8.2 The Syslog Daemon	B.1 LPI101 Exam
2.3 Managing User Accounts	8.3 The Log Files	B.2 LPI102 Exam
2.4 Password Administration	8.4 The logrotate Program	C Index of Commands
2.5 Group Management	8.5 Protocol of the System Kernel	
3 Permissions	9 File Backup and Archiving	
3.1 The Linux Permissions Concept	9.1 General	
3.2 The umask	9.2 Archiving Strategies	
3.3 Process Ownership	9.3 Archive Drives	
3.4 Specific Permissions for Executable Files	9.4 Backups in the Network	
3.5 Specific Permissions for Directories	9.5 Archiving Programs	
3.6 File Attributes	9.6 Data Compression	
4 Partitioning and File Systems	10 Time-controlled Processes—at and cron	
4.1 Basics of Hard Disk Partitioning	10.1 General	
4.2 Creating a New Partition	10.2 One-time Execution of Commands	
4.3 Creating a File System	10.3 Repeated Execution of Commands	
4.4 Repairing File Systems	11 Hardware and Computer Architecture	
4.5 Integrating File Systems	11.1 Overview	
4.6 Optimized Partitioning	11.2 The BIOS	
4.7 Disk Quotas	11.3 PC Bus Architectures	
5 The Bootloader	11.4 Audio Hardware	
5.1 What is a bootloader?	11.5 SCSI	
5.2 The Linux Loader LILO	11.6 USB	
5.3 The "Grand Unified Bootloader" GRUB	12 The Linux Kernel	
5.4 Removing the Bootloader	12.1 Monolithic and Modular Kernels	
5.5 Kernel Parameters	12.2 Knowing Your Kernel	
5.6 Problems at System Start	12.3 Modules	
6 System Start and System Stop	12.4 Manually Loading and Unloading Modules	
6.1 The Boot Process	12.5 Automatically Loading and Unloading Modules	
6.1.1 The Init Process	12.6 Module Dependencies	
6.2 Runlevel	12.7 Module Configuration	
6.3 The Single User Mode	13 Software and Package Management	
6.4 Shutdown of the System	13.1 Translating and Installing Software	
6.4.1 Reasons for Shutting Down	13.2 Program Libraries	
6.4.2 The shutdown Command	13.3 Package Management 1: Debian	
6.4.3 The sync Command	13.4 Package Management 2: RPM	
6.4.4 Restart		
7 Process Management
