

CPENT **Certified Penetration Tester**

EC-Council has launched the Certified Penetration Tester (CPENT), a new certification for penetration testing. This program closes qualification gaps and maps the professional role of a penetration tester and security analyst. Out-ofbox thinking is required for these professions as the challenges follow a progressive approach where the next challenge is more difficult than the previous one.

In this training, participants will learn how to perform an effective penetration test in an enterprise network environment that needs to be attacked, exploited, bypassed and defended. Those who have only worked in flat networks will take their skills to the next level through CPENT's live exercises, teaching the methods to pen test an IoT system, OT system, write their own exploits and create their own tools. It will demonstrate how to access hidden networks and how to get into the innermost segments of a network with customized scripts/exploits. CPENT

More than 90% -> LPT (Licensed Penetration Tester).

Course Contents

- Advanced Window Attacks
- Attacking IoT Systems
- Writing Exploits: Advanced Binaries Exploitation
- Bypassing a Filtered Network
- Pentesting Operational Technology (OT)
- Access Hidden Networks with Pivoting
- Double Pivoting
- Privilege Escalation
- Evading Defense Mechanisms
- Attack Automation with Scripts
- Build Your Armory: Weaponize Your Exploits
- Write Professional Reports

Target Group

The course is aimed at those who deal intensively with attacks and their defense on their own network: Penetration testers, ethical hackers, information security consultants, security testers and analysts, administrators (network, firewall, system), risk assessment experts.

Prerequisites

Comprehensive knowledge of penetration testing in various disciplines is required: Windows, IoT, inline defenses, automation, operational technology and advanced binary exploitation skills. Those seeking certification must be prepared to test not only automated tools, but also manual skills.

Table of Contents CPENT - Certified Penetration Tester

Module 01: Introduction to Penetration Testing	Appendix I: Active Directory Pen Test
Module 02: Penetration Testing Scoping and Engagement	Appendix J: Database Penetration Testing
Module 03: Open Source Intelligence (OSINT)	Appendix K: Mobile Device Penetration Testing
Module 04: Social Engineering Penetration Testing	
Module 05: Network Penetration Testing - External	
Module 06: Network Penetration Testing - Internal	
Module 07: Network Penetration Testing - Perimeter Devices	
Module 08: Web Application Penetration Testing	
Module 09: Wireless Penetration Testing	
Module 10: IoT Penetration Testing	
Module 11: OT/SCADA Penetration Testing	
Module 12: Cloud Penetration Testing	
Module 13: Binary Analysis and Exploitation	
Module 14: Report Writing and Post Testing Actions	
Appendix A: Penetration Testing Essential Concepts	
Appendix B: Fuzzing	
Appendix C: Mastering Metasploit Framework	
Appendix D: PowerShell Scripting	
Appendix E: Bash Environment and Scripting	
Appendix F: Python Environment and Scripting	
Appendix G: Perl Environment and Scripting	
Appendix H: Ruby Environment and Scripting
