Dell Data Protection Advisor (DPA) Implementation and Administration

This course explains and demonstrates the purpose, deployment, configuration and use of Data Protection Advisor (DPA). Participants will learn the key terms, concepts, use cases, key features and functions of DPA. The course will show how to deploy the DPA components, update them to the latest version and configure them for operation. It also shows how to create and manage user accounts; how to configure backup components for reporting purposes and configuring remote data retrieval; and how to connect data sources to DPA. Other topics include creating and interpreting reports and basic customization of dashboards and reports.

Course Contents
- Dell Data Protection Advisor Implementation
- Dell Data Protection Advisor Administration for the Sys Admin
- Dell Data Protection Advisor Administration for the Backup Operator

Target Group
This course is designed for system administrators, system engineers, partners and support specialists who manage and support Dell Data Protection Advisor.

Prerequisites
To understand the content and successfully complete this course, a participant must have a basic understanding of computer architecture, operating systems, networks, databases and enterprise data protection. Furthermore, experience with the administration and operation of at least one data protection product is an advantage.

Course Target
After successfully completing this course, participants should be able to:

- Discuss and compare the features and capabilities of Data Protection Advisor.
- Analyze the components and user interface of Data Protection Advisor.
- Analyze the deployment architecture of Data Protection Advisor.
- Find Data Protection Advisor software packages.
- Execute the Data Protection Advisor installation.
- Analyze the Data Protection Advisor licensing.
- Analyze the Data Protection Advisor user interface.
