

Device Administration with Cisco ISE

Use Cases, Configuration and Troubleshooting

Administrative access to network devices such as routers, switches or firewalls, e.g. via console or SSH, can be authenticated locally on these devices. However, control via the Cisco ISE is much more flexible, secure and scalable. As part of device administration, users can be managed centrally by the ISE itself or via a connected user database. In addition to authentication, the assignment of rights to administrators (authorization) plays an important role here. The behavior of the shell can be centrally controlled with RADIUS, and even individual commands with TACACS+. Meaningful audit logs are available via centralized reporting and accounting, as may be required in ISO-certified environments. This course highlights the advantages and disadvantages of TACACS+ and RADIUS in device administration and explains the configuration options on the ISE. A basic configuration of a distributed deployment with the various ISE nodes is described, and maintenance measures and the setup of Role Based Access Control (RBAC) are explained. Based on this, the authentication and, in particular, the authorization policy with its various conditions and results are addressed. The necessary peripherals, such as an Active Directory and a Microsoft PKI, are also included.

Course Contents

- Device administration, components and processes
- RADIUS vs. TACACS+
- Overview of the Identity Service Engine
- Licensing and Smart Licensing
- Installation and basic configuration of an ISE
- Node types in ISE deployments
- Device administration - configuration of network devices
- Authentication variants
- Use of external databases
- Policy-based control on the ISE
- Authentication and authorization rules,
- Conditions and results
- Possibilities of shell profiles
- Wildcards and regular expressions in command sets

E-Book The detailed digital documentation package, consisting of an e-book and PDF, is included in the price of the course.

Target Group

The course is intended for those who want to use Cisco ISE for centralized device administration control and/or require centralized audit logs.

Prerequisites

In addition to basic network and IP knowledge, you should have a basic understanding of operating a Cisco network.

This Course in the Web

You can find the up-to-date information and options for ordering under the following link:

www.experteach-training.com/go/ISED

Reservation

On our Website, you can reserve a course seat for 7 days free of charge and in a non-committal manner. This can also be done by phone under +49 6074/4868-0.

Guaranteed Course Dates

To ensure reliable planning, we are continuously offering a wide range of guaranteed course dates.

Your Tailor-Made Course!

We can precisely customize this course to your project and the corresponding requirements.

Training		Prices, excl. of V.A.T.	
Classes in Germany	3 Days	€ 2,195

Table of Contents

Device Administration with Cisco ISE – Use Cases, Configuration and Troubleshooting

1 AAA und Device Administration	3.3.2 Network Device Groups
1.1 Zentrale Zugriffskontrolle auf Network Devices	3.3.3 Im- und Export von Network Devices
1.1.1 Hintergründe	
1.1.2 Zugriffskontrolle in der Praxis	
1.2 RADIUS	4 Authentication und Authorization bei der Device Administration
1.2.1 Das Paketformat	4.1 Das ISE AAA-Konzept
1.2.2 RADIUS-Authentisierung und Autorisierung	4.2 Device Admin Policy Sets
1.2.3 RADIUS Accounting	4.2.1 Condition Elements
1.2.4 Funktion der RADIUS Attribute	4.2.2 Allowed Protocols
1.3 TACACS+	4.3 Die Authentication Policy
1.3.1 Das Paketformat	4.3.1 Authentication Condition Elements
1.3.2 TACACS+ Authentisierung	4.3.2 Identity Stores in der Authentication Policies
1.3.3 TACACS+ Autorisierung	4.3.3 Fallback-Szenarien
1.3.4 TACACS+ Accounting	4.4 User Stores
1.4 Konfiguration der Network Devices	4.4.1 Interne User
1.4.1 Einrichten der Radius Clients	4.4.2 Interne Gruppen
1.4.2 Einrichten der TACACS+ Clients	4.4.3 Externe Datenbanken
	4.4.4 Identity Source Sequence
2 ISE Grundkonfiguration	4.5 Device Admin – Authorization Policy
2.1 ISE-Konzept	4.5.1 Authorization Condition
2.1.1 Das ISE 3.x Lizenzmodell	4.5.2 Device Admin Result – Shell Profiles
2.2 Installation der ISE (1/3)	4.5.3 Device Admin Result – Command Set
2.2.1 ADE OS-Konfiguration	4.6 Device Administration per Radius
2.2.2 Die ISE über die CLI verwalten	4.6.1 Network Access Policy Sets
2.3 ISE-Access	4.6.2 Radius Authentication
2.3.1 ISE GUI	4.6.3 Radius Authorization
2.3.2 Launch Menü	
2.3.3 Zertifikate und ISE	5 Logging, Monitoring und Troubleshooting
2.4 ISE– Basic Device Admin Settings	5.1 Operationen im Überblick
2.4.1 PSN-Konfiguration	5.2 TACACS+ Logging
2.4.2 Device Admin – Overview	5.2.1 TACACS+ Reports
2.5 Deployments	5.2.2 TACACS+ Accounting
2.5.1 Node Registration	5.3 Radius Logging
2.5.2 Zertifikatsverwaltung im Deployment	5.3.1 Radius Authentication und Authorization
2.5.3 Redundanz in ISE-Deployments	5.3.2 Radius Accounting
3 Administration und Maintenance	5.4 Audit Reports
3.1 Admin Access	5.5 Troubleshooting mit TCP Dump
3.1.1 Administrator Groups	5.6 Log und Alarm-Einstellungen
3.1.2 Admin Policies	5.6.1 Log Categories
3.1.3 Admin Permissions	5.6.2 Alarm Settings
3.2 Maintenance	
3.2.1 Backup	
3.2.2 Scheduled Backups	
3.3 Network Access Devices	
3.3.1 NAD für TACACS+ konfigurieren
