

ISTQB® Certified Tester – Foundation Level

This seminar is part of the ISTQB® Certified Tester programme, the globally recognized, standardized training and development scheme for software testers. Testing is a process of analytical quality assurance that both statically and dynamically determines a certain required quality of a software product and finds errors. Testing takes place in all activities of the life cycle, including planning, analysis, execution and evaluation of test results. After attending the seminar, you will understand why software testing is necessary and what its basic principles are. You will know the different test levels, be able to apply test (management) procedures and have an overview of the area of application and the introduction of test tools.

The training courses are based on the new version 4.0 syllabus. The new release 4.0 represents a fundamental revision of the old syllabus and merges the two courses "Certified Tester - Foundation Level" and "Foundation Level - Agile Extension". The new version therefore focuses much more strongly on testing in agile environments.

Course Contents

- Basics on the Software Test
- Testing in the Software Life Cycle (e.g. Software Development Models)
- Test Scenario Development Procedure
- Static Test (e.g. Review, Static Analysis)
- Test Management (e.g. Test Organization, Test Planning, and Assessment, Risks)
- Tools for Test Support (e.g. Types, Use and Risks, Selection)

Each participant will receive the accredited, original course documentation.

Target Group

Test analysts, test managers, data analysts, developers, project managers, quality managers and engineers, business analysts, requirements engineers, IT managers and anyone who wants to learn more about software testing

Prerequisites

In principle, there are no entry requirements. Some knowledge of software development projects is an advantage.

Course Target

- Promote efficient and effective communication through the use of a common software testing vocabulary
- Understand basic concepts of software testing and test procedure optimization
- Apply best practices for designing tests at all test levels and interpreting tests against test specifications
- Report on test results, including defect reports
- Understand the principles of test management and the project drivers for resources, strategies and planning
- Understand the added value that software testing brings to stakeholders and contribute effectively in reviews
- Identify the skills required for testing and understand the impact of risk on testing
- Know the risks and benefits of test automation
- Certification testing

EXPERTeach

Our Training Offer for You:

Classroom Training

The live training experience in our training centers or on your premises on-site.

Online Training

Attend your course in online mode – without travel and accommodation expenses and effort.

Hybrid Training

Classroom & online in one course – choose how you wish to participate in your training event.

In-house Training

We create your customized training concepts for your project.

Guaranteed Course Dates

ExperTeach guaranteed course dates allow for secure and reliable planning.
