

# Network architectures for multi-cloud solutions

## SD-WAN, Cloud Connectivity and IT Security

Cloud solutions are an important part of enterprise IT, with hybrid cloud and multi-cloud scenarios mostly being applied. This inevitably raises the question of how on-premises IT should ideally be networked with the various clouds. A distinction must be made here between client-server connectivity and connectivity between private and public clouds. In both cases, there are many aspects to consider.

In this training, typical SD-WAN solutions and IT security concepts are highlighted, which create an optimal user experience when accessing IT services in multi-cloud environments. Furthermore, the different Cloud Connect variants are presented and their advantages and disadvantages are discussed. The special network functions and connectivity options of the so-called hyperscalers - Amazon Web Services (AWS), Microsoft Azure, Google Cloud Platform and Alibaba Cloud - will be discussed in detail, in addition to Oracle, IBM and SAP. With this knowledge, typical solution scenarios will be worked out interactively.

### Course Contents

- Multi-cloud - network aspects and challenges
- Application requirements
- Special case Office 365
- Structure and limitations of classic WANs
- SD-WAN: Concepts, solutions and market overview
- Security concepts for SD-WAN: SASE, zScaler and Cisco Umbrella SIG
- Network and security concepts for Microsoft Azure, AWS, GCP, Alibaba, Oracle, IBM and SAP
- Connectivity options for Microsoft Azure, AWS, GCP, Alibaba, Oracle, IBM and SAP
- Cloud Exchange Colocation & Interconnection Solutions
- Colocation via Equinix Cloud Exchange (ECX) and NTT Global Data Centers EMEA (formerly eShelter)
- Interconnection via DE-CIX Cloud Exchange via private cloud provider
- Interconnection via Carrier
- Typical designs, case study and best practices
- Outlook
- Final discussion and feedback round

**E-Book** The detailed digital documentation package, consisting of an e-book and PDF, is included in the price of the course.

### Target Group

This course is aimed at networkers, security specialists and IT architects who want to build or optimize network and security solutions for multi-cloud solutions. In addition to the possible connectivity options, it also covers the typical terms and concepts used by hyperscalers and large cloud providers in this context.

For networkers, security and IT architects who have been less involved with these topics, the course provides an ideal introduction to the world of SD-WAN, cloud connectivity and modern security concepts.

### Prerequisites

### Prerequisites

A basic understanding of WAN technologies, cloud computing and IT security is required.

### This Course in the Web

You can find the up-to-date information and options for ordering under the following link:  
[www.experteach-training.com/go/CCML](http://www.experteach-training.com/go/CCML)

### Reservation

On our Website, you can reserve a course seat for 7 days free of charge and in a non-committal manner. This can also be done by phone under +49 6074/4868-0.

### Guaranteed Course Dates

To ensure reliable planning, we are continuously offering a wide range of guaranteed course dates.

### Your Tailor-Made Course!

We can precisely customize this course to your project and the corresponding requirements.

Training	Prices, excl. of V.A.T.

## Network architectures for multi-cloud solutions – SD-WAN, Cloud Connectivity and IT Security

<b>1 Multi-Cloud—Networking Aspects and Challenges</b>	<b>2.5.5</b> Versa Networks	<b>3.6</b> IBM Cloud
<b>1.1</b> Definition: Cloud Computing	<b>2.5.6</b> HPE Aruba EdgeConnect (SilverPeak)	<b>3.6.1</b> IBM Cloud Direct Link Exchange and Cloud Exchange for Equinix
<b>1.1.1</b> Cloud Computing Service Models	<b>2.5.7</b> Palo Alto: Prisma SD-WAN	<b>3.6.2</b> IBM Cloud Direct Link Connect
<b>1.1.2</b> The different cloud variants—private cloud, public cloud,...	<b>2.5.8</b> Juniper Secure Vector Routing	<b>3.6.3</b> IBM Cloud Direct Link Dedicated
<b>1.2</b> Client/Server Communication	<b>2.6</b> Cloud Network as a Service (CNaas)	<b>3.6.4</b> IBM Cloud Direct Link Dedicated Hosting
<b>1.3</b> Server/Server Communication	<b>2.7</b> Teridion—Solutions and Implementation	<b>3.7</b> SAP HANA Enterprise Cloud
<b>1.4</b> Edge Computing	<b>3 Cloud Connectivity in Detail</b>	<b>3.7.1</b> VPN
<b>1.5</b> SLAs: Shared Responsibility	<b>3.1</b> Microsoft Azure	<b>3.7.2</b> Direct Connection—MPLS
<b>1.6</b> Requirements of the Applications	<b>3.1.1</b> Azure Network Structures for IT Architects	<b>3.7.3</b> SAP Cloud Peering
<b>1.7</b> Public IP Services	<b>3.1.2</b> IP Addressing in Azure	<b>4 Cloud Exchange</b>
<b>1.8</b> Special Case Office 365	<b>3.1.3</b> Encryption during Data Transport	<b>4.1</b> Cloud Exchange—Colocation & Interconnection
<b>1.9</b> Change in IP Traffic Flows in Companies	<b>3.1.4</b> Gateways (for VPN etc.) in Azure	<b>4.2</b> Equinix Cloud Exchange (ECX)
<b>1.10</b> Connectivity Options for Multi-cloud Solutions	<b>3.1.5</b> Load-balancing	<b>4.2.1</b> Service Level Agreements
<b>1.10.1</b> Public Internet Peering	<b>3.1.6</b> N-Layer Windows Application in Azure	<b>4.2.2</b> Ports, Virtual Connections, and Connectors
<b>1.10.2</b> IP VPN	<b>3.1.7</b> Routing in Microsoft Cloud Environments	<b>4.3</b> NTT Global Data Centers
<b>1.10.3</b> Dedicated WAN	<b>3.1.8</b> Public Internet Peering	<b>4.3.1</b> Multi-service Concept via MSIP port
<b>1.10.4</b> SD-WAN	<b>3.1.9</b> MS ExpressRoute	<b>4.3.2</b> Cloud Connect—Virtual Services
<b>1.10.5</b> Cloud Exchange	<b>3.1.10</b> Azure ExpressRoute—Big Picture	<b>4.4</b> Cloud Exchange via DE-CIX
<b>1.10.6</b> Cloud Provider as a Carrier	<b>3.1.11</b> IP VPN	<b>4.4.1</b> Implementation of AWS Direct Connect via DE-CIX DirectCloud
<b>1.11</b> Availability of Services in the Cloud	<b>3.1.12</b> Azure Virtual WAN	<b>5 Case Study and Summary</b>
<b>1.12</b> Application Migration into the Cloud	<b>3.2</b> Amazon Web Services—Basics	<b>5.1</b> Case Study
<b>1.13</b> Landing Zone	<b>3.2.1</b> VPCs and Subnetworks	<b>5.2</b> Summary, Discussion, and Feedback
<b>1.13.1</b> Cloud Strategy	<b>3.2.2</b> AWS Landing Zone	<b>A List of Abbreviations</b>
<b>1.13.2</b> Further Development: Landing Zone Life Cycle	<b>3.2.3</b> Connectivity VPC to VPC	
<b>1.13.3</b> Best Practices	<b>3.2.4</b> Hybrid Connectivity	
<b>2 SD-WAN and Security in Multi-cloud Solutions</b>	<b>3.2.5</b> Public Internet Peering	
<b>2.1</b> Setup and Limitation of Classic WANs	<b>3.2.6</b> AWS Direct Connect	
<b>2.2</b> SD-WAN	<b>3.2.7</b> DNS, NAT, and Security	
<b>2.2.1</b> SD-WAN: Customer Benefit	<b>3.3</b> Google Cloud Platform	
<b>2.2.2</b> Local Internet Break-out	<b>3.3.1</b> Logical Setup	
<b>2.3</b> Security Concepts for SD-WAN	<b>3.3.2</b> Google Direct and Carrier Peering	
<b>2.3.1</b> Local SD-WAN Security	<b>3.3.3</b> Cloud Interconnect	
<b>2.3.2</b> Regional Access	<b>3.3.4</b> Connection of the Google Cloud by means of Transit VPC	
<b>2.3.3</b> Security Concepts for SD-WAN	<b>3.3.5</b> Connection of the Google Cloud by Means of Transit VPC	
<b>2.3.4</b> Cisco Umbrella	<b>3.4</b> Alibaba Cloud	
<b>2.3.5</b> Palo Alto Networks Prisma Access	<b>3.4.1</b> VPN Gateway	
<b>2.3.6</b> Zscaler	<b>3.4.2</b> Smart Access Gateway—Proper SD-WAN Solution	
<b>2.4</b> SD-WAN Market	<b>3.4.3</b> Express Connect	
<b>2.5</b> Vendor Overview	<b>3.5</b> Oracle Cloud	
<b>2.5.1</b> Cisco SD-WAN powered by Viptela	<b>3.5.1</b> Oracle Setup	
<b>2.5.2</b> Cisco SD-WAN Powered by Meraki	<b>3.5.2</b> VPN Connect	
<b>2.5.3</b> VMware	<b>3.5.3</b> Fast Connect	
<b>2.5.4</b> Fortinet Secure SD-WAN
