New RAN O-RAN, vRAN, Cloud RAN, RAN in the 5G Campus

Mobile communications is a growth market of central importance for many industries worldwide. Within mobile communications, the focus is on the establishment and expansion of 5G networks, because 5G offers very high bit rates on the one hand, and very short runtimes and such high reliability on the other, as is required in the automation of industrial processes.

The key component of mobile communications is the Radio Access Network (RAN). O-RAN concepts are planned to ensure very high bit rates and at the same time a large area coverage. Thus, numerous manufacturers and providers have organized together in the O-RAN Alliance to develop open and thus cost-effective methods for building and operating the infrastructures. This course covers important concepts of modern O-RAN.

Course Contents

- Open RAN Framework from the perspective of the O-RAN Alliance and others
- RAN Intelligent Controller (RIC): non-real time RIC and near-real time RIC
- RAN structure: RU, DU, CU, Core and vDU, vCU, vCore
- Fronthaul, midhaul and backhaul structure for high bit rates and low latency
- RAN in 5G campus networks
- Difference between virtual RANs and cloud RANs
- Virtualization which components: vDU, vCU, vCore
- Virtual Machines vs Contrainer where do the differences lie?
- Automation: insight into Ansible, Docker and Kubernetes
- xApps and rApps who cares?
- Radio base station split (IEEE 802.1CM) and protocol split
- Classes and profiles (IEEE 802.1CM)
- nterfaces: CRPI vs eCPRI small letter, big impact
- Hollow core fiber for ultra low latency
- Interference due to slot and cell interference
- Coordinated Multi Point (CoMP) in campus networks
- Beamforming
- Network slicing in the RAN
- Time Error Budget (G.8271.1): in the RAN only 400 ns!
- Strategies for time sync. of base stations (gNodeB)
- Advantages and disadvantages of Global Navigation Satellite Systems (GNSS)
- Precision Time Protocol (PTP) in mobile radio: GM, BC (T-BC), TC, TSC
- RAN with Full Timing Support (FTS), G.8275.1
- Disadvantages with Partial Timing Support (PTS) and Assisted Timing Support (APTS)
- Time-Sensitive Networking (TSN) and RAN
- 5G and TSN for automation in industry, manufacturing, logistics and atomic motives
- TSN: time distribution, queueing and forwarding
- TSN: new paths for seamless redundancy

E-Book The detailed digital documentation package, consisting of an e-book and PDF, is included in the price of the course.

Target Group

5G RAN is of great importance for network operators, 5G campus operators as well as users of process automation. The course is aimed at people who evaluate, design, build or operate 5G and gives them a deeper insight into the technologies used in a modern O-RAN.

Prerequisites

New RAN

Building on good prior knowledge in the area of 5G, such as provided by the course 5G Mobile Communications - Architecture & Radio for Public & Private Networks, the aforementioned topics are covered in depth.

Status 04/11/2025

This Course in the Web

■ Xou can find the up-to-date information and options for ordering under the following link:

www.experteach-training.com/go/NRAN

Reservation

On our Website, you can reserve a course seat for 7 days free of charge and in an non-committal manner. This can also be done by phone under +49 6074/4868-0.

Guaranteed Course Dates

To ensure reliable planning, we are continuously offering a wide range of guaranteed course dates.

Your Tailor-Made Course!

We can precisely customize this course to your project and the corresponding requirements.

Training	Prices, excl. of V.A.T.

Table of Contents New RAN - O-RAN, vRAN, Cloud RAN, RAN in the 5G Campus

4.10.5 What happens if...?

5.1.3 An Example

5.3 Time and Precision

5.4.1 Transmission Order

5.5.2 Cyclic (Traffic Type II)

5.6 TSN Networks 5.7 Forwarding and Queuing

5.7.4 Guard Band

5.8

6.3

7

7.1 Delay

7.2

7.3

7.4

7.6

7.7

Α

5.7.7 Identify TSN Streams

Security

6.1 Security in Open RAN

6.2 Security in the Cloud RAN

6.3.1 Security and Synchrony

6.3.2 Example: GPS

6.3.3 GNSS Jammer

6.4 Attacks via PTP

6.4.1 Security with PTP

Exercises

7.5 Payload Bandwidth

6.2.1 Open RAN: Security Analysis

6.2.2 Which are the attack vectors? 6.2.3 Protection of the RAN

Protecting the Synchronization

6.3.5 Full Timing Support (FTS), G.8275.1

Fronthaul: PON Range

Size of an Antenna Array

Bit Rate and Radio Quality

Maximum Bit Rate

7.7.2 Maximum Bit Rate: Telefónica

7.7.3 Maximum Bit Rate: 1&1 Versate

7.7.5 5G Gigantic: Frequency Range 2

List of Abbreviations

7.7.4 Maximum Bit Rate: SBB, Switzerland

10 0

Size of the Resource Blocks (RB)

7.7.1 Maximum Bit Rate: Telekom, Vodafone

5.5.1 Isochronous (Traffic Type I)

5.5.3 Alarms & Events (Traffic Type III)

5.5.5 Network Control (Traffic Type V) 5.5.6 Best Effort (Traffic Type VI) and More

5.7.1 Cyclic Queuing and Forwarding (CQF)

5.7.3 Time-aware Shaper, IEEE 802.1Qbv

5.7.5 Time-controlled Gates, 802.1Qbv

5.7.6 Per-Stream Filtering and Policing (PSFP)

5.9 Seamless Redundancy, IEEE 802.1CB

6.1.1 Security According to O-RAN Alliance

Path Control and Redundancy 802 10ca

6.1.2 Security Risks According to the Open RAN MoU Group

6.1.3 Protection of the RAN Intelligent Controller (RIC)

6.3.4 Assisted Partial Timing Support (APTS), G.8275.2

5.7.2 Preemption and Interspersing Express Traffic 802.3br

5

5.2

5.4

4.10.6 Protection: PTP + SyncE

Time-Sensitive Networking in RAN

Redundant Synchrony, 802.1ASbt

5.5.4 Configuration & Diagnostics (Traffic Type IV)

5.1.1 Overview of Important Standards 5.1.2 TSN Basic Knowledge

5.1 Time-Sensitive Networking—IEEE 802.1 TSN

Basis: Precise Synchronization IEEE 802.1AS

5.5 Traffic Types of the Industrial Internet Consortium (IIC)

RAN in the Wind of Change 1

1.1 Centralized RAN

- Distributed RAN 1.2 1.2.1 Distributed Unit (DU)
- 1.2.2 Central Unit (CU)
- 1.2.3 Lower-Layer Split and Higher-Layer Split
- 1.2.4 Base Station and Protocols
- 1.2.5 Radio Base Station Split (RBS), IEEE 802.1CM
- 1.2.6 Function Splits in an Overview
- 1.2.7 802.1CM—Classes and Profiles
- 1.3 Open RAN (O-RAN)
- 1.3.1 O-RAN Alliance Framework
- 1.4 Virutalized RAN (vRAN)
- 1.4.1 vCLI Functions
- 1.4.2 Intra-gNodeB Handover
- 1.4.3 vDU Containerized Network Function 1.4.4 VNF Infrastructure with Container as a Service
- 1.4.5 Virtualized Core with MEC
- 1.4.6 Microservices and Container Structure
- 1.4.7 RAN Intelligent Controller (RIC)
- 1.5 Cloud RAN (cRAN)
- 1.6 RAN in 5G Private Networks
- 1.6.1 5G Frequency Allocation in Germany
- 1.6.2 Campus Networks in an Overview
- 1.6.3 Who uses campus networks?
- 1.6.4 Tracing
- 1.6.5 CoMP—Coordinated Multi-Point on the Campus
- 1.7 Network Slicing in the RAN
- 1.7.1 End-to-end Slicing 1.7.2 Network Slice Instance—Life Cycle
- 1.8 Hollow Core Fibers in the RAN
- 1.8.1 Example NKT Photonics: HC-1550
- 1.8.2 Example Lumenisity: SmartCore
- 1.8.3 Hollow Core Fiber in Fronthaul and Midhaul
- 1.9 Topologies for MEC

2 **RAN** Implementation

- 2.1 Virtualization
- 2.1.1 Container Virtualization
- 2.1.2 Linux Containers (LXC)
- 2.1.3 Container vs. Server Virtualization
- 2.1.4 Docker
- 2.1.5 Kubernetes
- 2.1.6 Kubernetes over bare metal 2.1.7 Orchestration: Puppet and Ansible
- 2.1.8 Ansible
- 2.2 Cloud Computing
- 2.2.1 Cloud Computing Service Models
- 2.2.2 Public Cloud vs. Private Cloud
- 2.3 Cloud RAN Components
- Ethernet in Fronthaul, Midhaul, and Backhaul 2.4
- 2.4.1 Fronthaul: 10 GE Interfaces
- 2.4.2 Midhaul and Backhaul: 40 GE and 100 GE 2.4.3 Backhaul: 200 GF and 400 GF
- 2.4.4 Example: 400GBASE-LR8
- 2.4.5 800 G Ethernet
- 2.5 Passive Optical Networks (PON)
- 2.5.1 PON in the Fronthaul
- 2.5.2 vRAN Midhaul: F1 via PON
- 2.5.3 Optical Distribution Network for eMBB
- 2.5.4 Protection for PON
- 2.5.5 OSFP28 and SFP28 for PON
- 2.6 Packet-switched network or wavelength?
- WDM—A Universal L1 Platform for 5G 2.7
- 2.7.1 Fronthaul as WDM Ring
- 2.7.2 CWDM—Coarse WDM for Fronthaul and Midhaul
- 2.7.3 DWDM Channel Spacing
- 2.7.4 CWDM—Advantages and Disadvantages
- 2.7.5 Passive WDM
- 2.8 DWDM—Dense WDM for Midhaul and Backhaul

- 2.8.1 DWDM Components 2.8.2 Setup of a DWDM Mux
- 2.8.3 Setup of a WDM Link
- 2.8.4 Important Benefits
- 2.8.5 DWDM Channel Spacing
- 2.8.6 Fixed Grid Spacing
- 2.8.7 Flexible Grid Spacing
- 2.8.8 CWDM and DWDM in Comparison
- 2.8.9 CWDM and DWDM in Combination
- 2.8.10 Pros and Cons-Disadvantages of WDM
- 2.9 Optical Transport Networks (G.709) in Front- and Midhaul 2.9.1 Monitoring Network Sections
- 2.9.2 The Structure of OTN
- 2.9.3 OTN—Frame Setup
- 2.9.4 EEC According to RS (255, 239)
- 2.9.5 OTN Multiplexing
- 2.9.6 Alarms and Error Sources
- 2.9.7 Error cascade—who is sending whom which message?
- 2.10 Protection Mechanism
- 2.10.1 Equipment Protection
- 2.10.2 Point-to-Point Connections
- 2.10.3 Optical Protection in Rings

3 From MIMO to Beamforming

- 3.1 What are 5G antennas supposed to do?
- 3.1.1 TDD and Transmission Periodicity
- 3.1.2 OFDMA Procedure
- 3.1.3 Modulation Procedures 3.1.4 Adaptive Modulation and Coding
- 3.1.5 MIMO with 5G
- 3.1.6 Massive MIMO
- 3.2 Antennas—from 4G to 5G
- 3.3 From Massive MIMO to Beamforming
- 3.3.1 How Beamforming Works
- 3.3.2 Setup of a 5G Antenna Arrays
- 3.3.3 Array and Antenna Gain 3.3.4 Analog Beamforming
- 3.3.5 Digital Beamforming
- 3.3.6 Hybrid Beamforming

4.2.1 Clocks and Tasks

4.3

4.6

Synchronization in the RAN 4 4.2 5G and PTP (IEEE 1588)

4.2.2 Clocks and Network Design

4.4 PTP Telecom Profile, G.8265

4.4.1 Correction of the Offset

4.4.2 Measuring the Delay

4.4.7 Boundary Clock (BC)

Clock Topologies

4.6.3 Quality Level for PTP, G.781

4.8 PTP Monitoring—An Example

4.10 Synchronization and Protection

4.9.3 Dangers for Boundary and Transparent Clocks

4.10.4 Failure of the master—how can it be detected?
