

StableNet Training – Advanced

SNS110

StableNet Training – Advanced

Building on the Basic course, the StableNet® Training - Advanced deepens the know-how. This three-day course focuses on how devices can be automatically added to the system using various Discoveries and how these devices can be enriched with additional information (tagging). In addition, monitoring methods including templates and scripting are presented, as well as the creation of users and groups. The assignment of corresponding roles is also taught. The structural representation (tag tree) is introduced, which, among other things, enables clear and fast error localization. The basics of NCCM (device backup and configuration, policy checking and vulnerabilities) are also taught.

Course Contents

- Installation (Update, Maintenance & Tools, Agent Expert, User & Customer Management)
- Operation (Backup and Recovery, Self-Monitoring)
- Performance (SNMP Templates, Business Process Scripts, Inventory (XML Discovery))
- Fault Management (Alarm Groups & Scripts, Business Hour Groups, Maintenance, Trap and Syslog Measurements)
- NCCM (Backup and Configuration, Policy Checking & Vulnerability)
- Analysis (Inventory - Advanced Features)

Documentation:

The course participants receive the documents in digital form at the end of the training.

Certificate:

After successful participation in the training, course participants receive the "StableNet® Certified Engineer" certificate.

Target Group

This course is primarily aimed at managers who also carry out administrative activities in StableNet and set up the system so that all users can use it efficiently (creating templates, reports, weathermaps, discoveries) and set appropriate authorizations.

Prerequisites

Participants should already have attended the StableNet Training - Basic and have in-depth network and IT know-how.

Alternatives

Book this course together with *StableNet Training – Basic – SNS100* as *PowerPackage StableNet – Basic & Advanced* for the discounted price of € 3.995,-.
