

TCP/IP

Protocols, Addressing, Routing

In the IT world, the TCP/IP protocol stack plays a predominant role. Even applications such as telephony, which formerly had nothing to do with IP, are now an integral part of TCP/IP. Knowledge of the associated protocols is an absolute must for any system or network administrator. The know-how imparted with many practical examples enables the participants to actively participate in the planning, setup, operation and administration of IP-based networks. The focus of this course is on communication between clients and servers, the protocols and services required for this, and the most common TCP/IP-based applications.

Course Contents

- Overview of the TCP/IP protocol family
- Uses and applications for TCP/IP
- End devices and switches - components in the TCP/IP network
- Addressing with IPv4 and IPv6
- Public and private IP addresses
- IP networks, subnet masks and default gateways
- Network and Port Address Translation (NAT and PAT)
- TCP/IP in local networks - cooperation with Ethernet and WLAN
- Address resolution (ARP)
- IP routing in companies and on the Internet, routing protocols
- The ICMP protocol for testing and troubleshooting
- Dynamic Host Configuration Protocol (DHCP)
- Name resolution via Domain Name Service (DNS)
- The TCP transport protocol - ports, flow control and retransmissions
- The transport protocol UDP and its special features
- Classic TCP/IP applications such as HTTP and FTP, Telnet, SSH and Voice over IP
- Threats and security in IP networks
- Exercises and demonstrations on the test network

E-Book You will receive the comprehensive documentation package of the ExperTeach Networking series – printed documentation, e-book, and personalized PDF! As online participant, you will receive the e-book and the personalized PDF.

Target Group

This course teaches the basics of networking to anyone involved in the planning, implementation, and operation of client-server systems and networks. It is suitable for anyone who wants to learn about the world of TCP/IP from a technical perspective.

Prerequisites

Basic network know-how as imparted e.g. in the course Networking Technologies is the prerequisite for a successful participation in this course.

This Course in the Web

You can find the up-to-date information and options for ordering under the following link:
www.experteach-training.com/go/INIP

Reservation

On our Website, you can reserve a course seat for 7 days free of charge and in a non-committal manner. This can also be done by phone under +49 6074/4868-0.

Guaranteed Course Dates

To ensure reliable planning, we are continuously offering a wide range of guaranteed course dates.

Your Tailor-Made Course!

We can precisely customize this course to your project and the corresponding requirements.

Training		Prices, excl. of V.A.T.
Classes in Germany	3 Days	€ 1,595
Classes in Austria	3 Days	€ 1,595
Classes in Switzerland	3 Days	€ 2,150
Online Training	3 Days	€ 1,595
Date/course venue	Course language German	
04/09-06/09/24	München	27/01-29/01/25
04/09-06/09/24	Online	27/01-29/01/25
04/09-06/09/24	Zürich	12/03-14/03/25
16/10-18/10/24	Berlin	12/03-14/03/25
16/10-18/10/24	Hamburg	15/04-17/04/25
16/10-18/10/24	Online	15/04-17/04/25
11/11-13/11/24	Düsseldorf	15/04-17/04/25
11/11-13/11/24	Online	26/05-28/05/25

Table of Contents

TCP/IP – Protocols, Addressing, Routing

1 An Overview of the TCP/IP World	3.3.3 Address Types	6.3 HTTP—World Wide Web
1.1 Success Story of the Internet Protocol	3.3.4 Special Addresses	6.3.1 Browser and Server
1.1.1 Internet Standards	3.4 ICMPv6	6.3.2 HTTP Versions
1.2 Fields of Application and Trends	3.4.1 ICMPv6 Echo and Echo Reply	6.3.3 The HTTP Protocol
1.2.1 Who speaks IP?	3.4.2 ICMPv6 Error Messages	6.3.4 Communication Behavior of HTTP/1.1
1.2.2 IP in Local Area Networks (LAN)	3.5 Neighbor Discovery with ICMPv6	6.3.5 Communication Behavior of HTTP/2
1.2.3 IP in Enterprise Networks	3.6 Address Assignment with IPv6	6.3.6 Functions and Tasks of a Proxy Server
1.2.4 IP in the Internet	3.6.1 Static Configuration	6.3.7 HTTPS—Secure Transmission
1.3 The Major Trend: The Internet of Things (IoT)	3.6.2 Stateless Auto-configuration	6.4 File Transfer with FTP and TFTP
1.3.1 Application Fields of IoT	3.6.3 DHCPv6—Variants	6.4.1 Active FTP
1.3.2 Digitization	3.7 Interworking with IPv4	6.4.2 Passive FTP
1.3.3 Example: Digitization in Production	3.7.1 Configured Tunneling	6.4.3 TFTP
1.4 The Protocol Family and its Tasks		6.4.4 File-sharing—Peer-to-Peer Applications
1.4.1 IP Packets	4 IP Routing—The Path through the Network	6.5 E-Mail—Electronic Mail
1.4.2 IP Addressing and Routing	4.1 IP Routing—Definition	6.6 Voice over IP (VoIP)
1.4.3 Routing and Availability Information	4.2 The Data Transport through a Network	6.6.1 Real-time Applications over IP—RTP
1.4.4 Requirement: Defined Quality of Service	4.2.1 Sending a Packet	6.6.2 Signaling
1.4.5 Layer 2	4.2.2 Receiving a Packet	6.6.3 Connection Setup via SIP
1.4.6 End-to-end Routing	4.2.3 Routing Decision	6.7 Remote Access via Telnet or SSH
	4.2.4 Exit Interface	6.8 SNMP for Network Monitoring
2 IP Version 4—Addresses, Networks, Functions	4.2.5 A Routing Table	6.8.1 The Management Information Base (MIB)
2.1 Addressing with IPv4	4.3 Static or Dynamic Routing	
2.1.1 The Task of IP Addressing	4.4 Routing Protocols	A TCP/IP—Hands-on Exercises in the Test Network
2.1.2 Representation of an IP Address	4.4.1 Routing by Means of Metrics	A.1 The Test Network
2.1.3 The Subnet Mask	4.4.2 Metrics of Routing Protocols	A.1.1 Connection of On-site Clients
2.1.4 Addresses and Networks	4.4.3 Classification of Routing Protocols	A.1.2 Access to Virtual Clients
2.1.5 Network Addresses and Broadcasts	4.4.4 Application Areas of Common Routing Protocols	A.2 Wireshark—Short Overview
2.2 Public and Private IP Addresses	4.4.5 Example—RIP	A.2.1 Starting the Capture
2.2.1 Private IPv4 Addresses and NAT	4.4.6 Example—OSPF	A.2.2 Display Filter
2.3 Subnetting for IPv4	4.5 Routing in the Internet	A.2.3 Saving a Capture
2.3.1 Calculation of Subnetworks	4.5.1 Exchanges	A.2.4 Basic Display Filters
2.3.2 Subnetting with Networks of the Same Size	4.5.2 Routing Protocols in the Internet	A.2.5 Saving Filtered Packets
2.3.3 Variable Length Subnet Mask (VLSM)		A.3 Lab 1—Ping in Detail
2.3.4 Subnetting and Route Summarization	5 The Transport Protocols	A.4 Lab 2—Routing Table of the End Device
2.4 IPv4—Fields and Protocol Functions	5.1 Transport Protocols	A.5 Lab 3—DHCP Processes
2.4.1 Type of Service	5.1.1 Tasks and Functions	A.6 Lab 4—Manual IP Addresses
2.4.2 MTU and Fragmentation	5.1.2 Source and Destination Port	A.7 Lab 5—ARP Tables
2.4.3 Time-to-Live	5.2 UDP—Connectionless and Unacknowledged	A.7.1 Lab 5b—Local Address Resolution
2.5 The Address Resolution Protocol (ARP)	5.2.1 Unacknowledged Communication	A.7.2 Lab 5c—Resolution for Foreign Networks
2.5.1 IP Addressing and ARP	5.2.2 Typical UDP Applications	A.8 Lab 6—Traceroute
2.5.2 ARP Cache	5.3 TCP—Connection-Oriented and Acknowledged	A.9 Lab 7—Erroneous IP Information
2.5.3 Duplicate Address Test with ARP	5.3.1 The Flags in the Code Field	A.9.1 Lab 7—Faulty Subnet Mask—I
2.6 ICMP—Troubleshooting and Diagnosis	5.3.2 TCP Basic Functions	A.9.2 Lab 7—Faulty Subnet Mask—II
2.6.1 ICMP Ping and Echo	5.3.3 TCP Options during Connection Setup	A.10 Lab 8—Duplicate IP Addresses
2.6.2 ICMP Error Messages	5.3.4 Sequencing of Data	A.11 Lab 9—DHCP Processes
2.7 Multicast Addresses and Multicasting	5.3.5 Overload and Flow Control	A.12 Lab 10—FTP
2.7.1 Multicast IP Addresses	5.3.6 Packet Loss and Retransmission	A.13 Solutions for Lab Exercises
2.7.2 Multicasting in the LAN	5.4 SCTP	
	5.5 QUIC—The New Transport Protocol	B Exercise Tasks on IP Addressing and Subnetting
3 IP Version 6—Addresses, Networks, Functions	5.6 HTTP—The Clandestine Transport	B.1 Exercise: Presentation of the Subnet Mask
3.1 Motivation for IPv6		B.2 Exercise: Computation of Subnetworks
3.1.1 Address Space	6 Typical Applications of the TCP/IP World	B.3 Exercise: Subnetwork Calculation with Magic Number
3.1.2 Header and Routing	6.1 DHCP	B.4 Exercise: Variable Subnetting (VLSM)
3.2 Changes with IPv6	6.1.1 DHCP Default Functions: DORA	B.5 Solutions to the Exercises
3.2.1 Protocol Header	6.1.2 Further DHCP Functions	
3.2.2 Extensions and Next Header	6.1.3 Duplicate Address Test (DAT)	C Useful Commands
3.2.3 IPsec	6.1.4 BootP-Relay	
3.3 IPv6 Addresses and Address Types	6.2 DNS—Working with Names	D List of Abbreviations
3.3.1 Addressing Concepts	6.2.1 Name Resolution via DNS	
3.3.2 Structure of IPv6 Addresses	6.2.2 DNS between Client and Server
