

Virtualization with KVM

With this seminar you will acquire knowledge about the basic types and differences of virtualization. You will learn where virtualization can be used sensibly, learn how to install and configure KVM, implement different network setups and set up different guest systems.

Course Contents

- Virtualization approaches
- What is KVM?
- The qemu/kvm management tool
- Management of virtual disks, snapshots and overlays
- Network management
- Effective and automated installations using the example of vmbuilder
- Resource management (memory, CPU, other hardware)
- Migration and central storage management (NFS)
- Machine management on a large scale: libvirt

Target Group

This course is suitable for all system and network administrators who want to consolidate or simplify existing systems or set up test systems.

Prerequisites

Participants should have detailed knowledge of Linux administration. In-depth knowledge of networks and the TCP/IP protocol stack is also required.

This Course in the Web
