

Splunk - Developer Fast Start

Introduction to Dashboards: designed for power users who want to learn best practices for building and editing JSON-based dashboards in Dashboard Studio. It focuses on creating inputs, editing dashboard source code, chain searches, event annotations, and improving dashboard performance

Dynamic Dashboards: designed for power users who want to learn best practices for creating JSON-based, interactive dashboards in Dashboard Studio. It focuses on creating user inputs, editing dashboard source code, chain searches, event annotations, and improving dashboard performance.

Advanced Dashboards and Visualizations: designed for advanced users who want to create SplunkJS-based dashboards and forms. It focuses on creating dashboards, adding inputs, using event handlers and creating Splunk Custom Visualizations.

Building Splunk Apps: focuses on Splunk Enterprise app development. It's designed for advanced users, administrators, and developers who want to create apps using the Splunk Web Framework. Major topics include planning app development, creating data generators and data inputs; the REST API, setup screens, KV Store, and app packaging.

Developing with Splunk's REST API: for developers who want to use the Splunk REST API to interact with Splunk servers. In this course, use curl and Python to send requests to Splunk REST endpoints and learn how to parse and use the results. Create a variety of objects in Splunk, learn how to change properties, work with and apply security to Splunk objects, run different types of searches and parse its results, ingest data using the HTTP Event Collector and manipulate collections and KV Stores.

Kursinhalt

- Introduction to Dashboards
- Dynamic Dashboards
- Advanced Dashboards and Visualizations
- Building Splunk Apps

Voraussetzungen

To be successful, students should have a solid understanding of the following courses:

- What is Splunk?
- Intro to Splunk
- Using Fields
- Visualizations
- Leveraging Lookups & Subsearches
- Correlation Analysis
- Search Under the Hood
- Introduction to Knowledge Objects
- Creating Knowledge Objects
- Creating Field Extractions
- Enriching Data with Lookups
- Introduction to Dashboards
- Dynamic Dashboards

Students should also understand the following advanced coursework:

- Advanced Dashboards & Visualizations
- Splunk Enterprise System Administration (recommended)

Recommended Skills:

- Experience with HTML, CSS, and XML
- Experience with JavaScript
- Using a terminal text editor (vi, Nano, etc.)

Kursziel

Splunk Certified Developer (Prereq for this cert is the Splunk Core Certified Power User AND Splunk Enterprise Certified Admin OR Splunk Cloud Certified Admin)

Stand 23.04.2022

Inhaltsverzeichnis

Splunk - Developer Fast Start

Introduction to Dashboards :

Topic 1 - Dashboard Framework

Describe the dashboard definition
Compare classic and dashboard studio dashboards
Manage view
Use dashboard best practices

Topic 2 - Create a Prototype

Describe dashboard workflows
Compare layout types
Identify layout fields
Add visualizations

Topic 3 - Use Dynamic Coloring

Describe dynamic coloring
Contrast visualization types
Set global time parameters
Apply dynamic coloring

Dynamic Dashboards :

Topic 1 - Selecting a Data Source

Identify dataSources stanza fields
Name search types
Use a secondary data source

Topic 2 - Adding Inputs

Identify types of inputs
Describe how inputs work
Create a dynamic input
Add cascading inputs

Topic 3 - Improving Performance

Identify performance improvement methods
Use tstats and accelerated data models
Create chain searches
Set defaults
Advanced Dashboards and Visualizations :

Module 1 – SplunkJS Dashboards

Identify view types
Create a SplunkJS dashboard
Define view properties, methods and events
List types of search managers

Module 2 – Using Tokens

Use tokens in SplunkJS
Define Splunk's token models
Describe how to get, set, and change tokens
Create a SplunkJS form

Module 3 – Using Event Handlers

Identify types of event handlers
Define event handler syntax
Define drilldown properties
Create an event handler

Module 4 – Creating Custom Visualizations

Define the custom visualization primary files
Add custom visualizations to views
Create a custom visualization
Define security best practices

Building Splunk Apps :

Module 1 – Planning App Development

Create a development environment
Improve app performance
Identify Splunk log files
Use security best practices
Create a data generator

Module 2 – Creating Apps

Define the web framework architecture
Identify ways to build Splunk apps
Manage apps and add-ons
Create an app
Configure app properties
Create app navigation

Module 3 – Adding Data

List types of data inputs
Identify ways to add data
Define when to use a scripted input
Create a modular input

Module 4 – Using the REST API

Explain how the Splunk REST API works
Define API endpoints
Explain how the KV Store works
Create a KV Store
Use lookups with a KV Store

Module 5 – Packaging Apps

Create an app setup screen
Define search time precedence
Explain local and default differences
Package an app
Developing with Splunk's REST API :

Module 1 – Introduction to the Splunk REST API

Introduce the Splunk development environment and its REST endpoints
Connect to the appropriate Splunk server to accomplish a

desiredtask

Authenticate with a Splunk server, with and without a session

Module 2 – Namespaces and Object Management

Understand general CRUD with the REST API
Identify how a namespace affects access to objects
Use the servicesNS node and a namespace to access objects
Understand how the sharing level and access control lists affect access to objects
Modify the sharing level and the permissions on an object
Use the rest command.

Module 3 – Parsing Output

Understand the general structure of Atom-based output
Format Atom-based XML and JSON output
Write code that uses the API and parse responses

Module 4 – Oneshot Searching

Review search language syntax and search best practices
Execute oneshot searches
Get search results and parse them

Module 5 – Normal and Export Searching

Identify types of searches
Execute normal and export searches
Get search results, job status and search job properties.

Module 6 – Advanced Searching and Job Management

Execute real-time searches
Work with large result sets
Work with saved searches
Manage search jobs

Module 7 – Working with Indexes

Define the function of a KV Store
Define collections and records
Perform CRUD operations on collections and records

Module 8 – Using the HTTP Event Collector (HEC)

Create and use HEC tokens
Input data using HEC endpoints
Get indexer event acknowledgements

Appendix – Useful Admin REST APIs

Get system information
Manage Splunk configuration files
Manage Indexes
